

Corporate Website — Requirements & Vision

Full-Stack Corporate Website

A concise document outlining the vision for the Nexora website, the required pages, core features, and the technical requirements for handoff to the design and development team.

Identity	Nexora Software Solutions
Project Type	An official, fully integrated corporate website
Languages	Arabic and English
Goal	Showcase services and projects, and receive client requests

1. Website Concept and Goals

The Nexora website will be the company's official face, presenting its identity, services, and projects clearly and professionally. It isn't just a static page — it's a system that can be updated and managed through a dedicated dashboard.

Main Goals

- Present a professional and trustworthy image of Nexora.
- Explain the software services and solutions the company offers.
- Showcase completed and upcoming projects.
- Make it easy for clients to get in touch and submit project requests.
- Support Arabic and English, with RTL and LTR.
- Update content without needing to edit the code each time.

2. Core Pages

Page	Content
Home	Brief intro, services, featured projects, Coming Soon, and buttons to contact / start a project.
About	Company introduction, vision, mission, and values.
Services	Website & app development, custom systems, UX/UI, APIs, databases, and support.
Projects	Showcase projects with description, images, and technologies used.
Coming Soon	Upcoming products/ideas and the status of each project.
Contact	Contact form, email, social links, and company information.

3. Additional Pages & Features

- Our Process: explains the work stages from concept to delivery.

- Case Studies: presents the problem, solution, technologies, and results.
- Nexora Blog / Insights: articles on development, digital transformation, and technology.
- Careers: lists job openings and allows resume submissions.
- FAQ: answers about workflow, timeline, support, and estimated cost.
- Start Your Project: a form collecting project type, budget, timeline, and description.

4. Design & User Experience

- Modern, minimal design reflecting Nexora's identity without clutter.
- Use the provided logo as-is, preserving its colors and proportions.
- Orange as the accent color, paired with dark, neutral tones.
- Full compatibility across phone, tablet, and desktop.
- Easy navigation and clear buttons for contact and project requests.
- RTL support for Arabic and LTR for English.
- Attention to load speed, font clarity, and contrast.

5. Homepage Content

- A headline stating that Nexora builds practical digital solutions.
- A short description explaining the company's value to clients.
- Cards for the main services.
- A section for featured projects.
- A Coming Soon section for Nexora's products.
- A clear call to action to get in touch or start a project.

6. Full-Stack Technical Requirements

The site should be built in a scalable way, separating the frontend from the backend and database, and allowing content management from the dashboard.

Layer	Suggested Technology	Tasks
Frontend	React or Next.js + Tailwind CSS	Pages, design, translation, forms, and user experience.
Backend	Node.js + Express.js	REST API, authentication, permissions, and request handling.
Database	PostgreSQL or MongoDB	Store projects, services, articles, and messages.
Authentication	JWT or secure Sessions	Admin login and permission management.
Deployment	Hosting + HTTPS + backups	Run, monitor, and protect the site.

7. Admin Dashboard

- Manage services, projects, and technologies.
- Manage Coming Soon projects and their status.

- Manage blog posts, categories, and images.
- Manage job listings and applications.
- View Contact Us messages and Start Your Project requests.
- Edit company info, social links, and site settings.
- Upload images and files with type and size validation.

8. Core Database Entities

Admin Users, Projects, Services, Technologies, Blog Posts, Blog Categories, FAQs, Jobs, Job Applications, Contact Messages, Project Requests, Website Settings, Media.

9. Security & Performance

- Encrypt passwords; never store them in plain text.
- Validate input on both the frontend and backend.
- Protect the dashboard and API endpoints from unauthorized access.
- Restrict uploaded file types and sizes.
- Use HTTPS and secret environment variables.
- Protect forms from spam.
- Compress images and improve load speed and caching.

10. SEO & Integrations

- Set a Meta title and description for every page.
- Create a Sitemap and Robots.txt.
- Search-engine-friendly URLs.
- Prepare social-sharing pages.
- Connect an analytics tool such as Google Analytics.
- Add Facebook, Instagram, and LinkedIn links, plus a direct contact option when needed.

11. Deliverables from the Development Team

- Frontend: responsive and well-organized.
- Backend and REST API: documented.
- An organized database.
- A dashboard for content management.
- Testing of forms, permissions, and device compatibility.
- Delivery of the code, setup files, and an explanation of operation and administration.

12. Closing Notes

It's best to start with a first version covering the core pages, services, projects, Coming Soon, contact, and the dashboard. The blog, careers, client accounts, project tracking, and online payment can be added in later phases.
